Result No.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The assay is versatile in that any number of test sequences CC can be tested by placing the test sequence adjacent to a defined protein CC binding screening sequence. Binding of mols. to these test sequences CC changes the binding characteristics of the protein mol. to its cognate CC binding sequence. When such a mol. binds the test sequence, the CC could be concentration of free DNA probe. One application of this method is to eucaryotic general transcription factors (e.g. TPIID), where the target region is typically selected from DNA sequences adjacent to the CC target region is typically selected from DNA sequences adjacent to the concentration of the sequences in AAQ69251-731 and AAQ69850 CC correspond to promoter targets (typically, TATA box-contg. sites) for human genes and the sequences in AAQ69732-849 correspond to promoter targets for viral genes. The test sequences may also be randomly CC generated. DNA;protein interaction may be used for screening purposes, c.g. the Herpes Simplex Virus (HSV) origin of replication and UL9 (see CAAQ69851-52, AAQ69865 and AAQ69891). (Updated on 25-MAR-2003 to correct
                                                                                                                                                                                                                                                                                     밁

                                                                                                                                                                                                  The sequences given in AAT63713-4312 represent duplex DNA's which act as comparison in the method of the invention. The method for altering the binding characteristics of a DNA-binding protein to duplex DNA CC comprises contacting the duplex DNA with a small molecule which binds CC sequence-specifically to a target region, where, when the small molecule is bound to the target region, it is adjacent to, but not overlapping by CC more than 4 bp, a binding slite for a DNA-binding protein. The small CC molecule is added at a concentration effective to alter the binding of the DNA binding protein, pref. TFIID, to its binding slite on the duplex DNA. The binding protein to its binding slite or enhance the binding of the DNA-binding protein to its binding slite. The compounds isolated considered the DNA-binding protein to its binding slite. The compounds isolated considered the DNA-binding protein to its binding slite. The compounds isolated considered to fany disease which involves a specific DNA sequence, e.g. CC cancer, or inherited genetic disorders etc. The method is suitable for creening large biological or chemical libraries and allows determination of sequence-specific and relative affinities of known DNA-binding agents for considered DNA protein interaction to be used for screening sequence-specific, or preferential, DNA binding proteins that recognise almost any possible sequence (see also AAT49539-74).                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              correspond to promoter targets for viral genes

chaving a test sequence adjacent to a screening sequence, where the
screening sequence binds to the DNA-binding protein with a binding
affinity that is independent of the DNA sequence of the test sequence,
and where the mixture of duplex DNA test oligonucleotides includes
several test sequences; (ii) incubating the test molecule, the mixture of
duplex DNA test oligonucleotides and the DNA-binding protein for a time
sufficient to permit binding of the test molecule to test sequences in
the duplex DNA; (iii) separating unbound test oligonucleotides from test
cligonucleotides bound to binding protein; (iv) amplifying the unbound
test oligonucleotides; (v) repeating steps (ii) to (iv); (vi) isolating
the amplified test oligonucleotides; and (vii) sequencing the isolated
test oligonucleotides. Test sequences AAX17001-X17481 and AAX17600
correspond to promoter targets for human genes and test sequences
AAX17482-X17599 correspond to promoter targets for viral genes
                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method of decreasing transcriptional activity CC in a duplex deoxyribonucleic acid (DNA) template (T1) comprising CC contacting (T1) with a binding agent comprising at least one small duplex DNA-binding molecule (T2) coupled to at least one small duplex CC binding molecule that binds to a non-overlapping region of target sequence (TS). The method is useful for inhibiting transcription of a range of disease-related genes for treating infections (by viruses, CC including human immunodeficiency virus, bacteria, fungi, protozoa and CC parasites), cancer, cardiovascular, respiratory, gastrointestinal, CC endocrine/metabolic, rheumatic/immunological, haematological, usculocated (contrological, psychiatric, dermatological, ophthalmological, usculocated (contrological, psychiatric, dermatological, ophthalmological genetic inhibition of transcription of pathological genes without affecting transcription of cellular genes regulated by the same CC transcription factor, and can be applied to regulation of any gene. CC LRK82492-ABK83155 represent DNA binding molecule test sequences used in CC the method of the invention

The system is useful for leukocyte expression profiling. It is particularly useful for disgnosing a disease, monitoring (rate of) progression of a disease, predicting therapeutic outcome, determining prognosis for a patient, predicting disease complications in an individual or monitoring response to treatment in an individual. The diseases include cardiac allograft rejection, kidney allograft rejection, liver allograft rejection, atheroselerosis, congestive heart failure, systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis or cytomegalovirus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New system for leukocyte expression profiling, diagnosing a disease, or monitoring (the rate of) progression of a disease, e.g. atherosclerosis or congestive heart failure, comprises diagnostic oligonucleotides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a system for detecting gene expression, which comprises one or two isolated DNA molecules that detect expression of a gene, where the gene corresponds to any of 8143 oligonucleotides (ABZ00010-ABZ08152) each having 50 base pairs (bp). The system is useful for leukocyte expression profiling. It is particularly useful for diagnosing a disease, monitoring (rate of) progression of a disease, predicting therapeutic outcome, determining prognosis for a patient, predicting disease complications in an individual or monitoring response to treatment in an individual. The diseases include cardiac allograft rejection, kidney allograft rejection, liver allograft rejection, atherosclerosis, congestive heart failure, systemic lupus erythematosus, heavened to the statistic authorities of the systemic lupus erythematosus,
                                                                                                                                                                                                                                                                                                                                                                                                                                               systemic lupus erythematosis; rheumatoid arthritis; cholecystitis; Sjogren's disease; CREST syndrome; scleroderma; ankylosing spondylitis; ulcerative colitis; primary sclerosing cholangitis; appendicitis; diverticulitis; primary biliary sclerosis; probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New system for leukocyte expression profiling, diagnosing a disease, or monitoring (the rate of) progression of a disease, e.g. atherosclerosis or congestive heart failure, comprises diagnostic oligonucleotides.
                                                                                             Diagnosing or monitoring autoimmune and chronic inflammatory diseases, such as rheumatoid arthritis, systemic lupus erythematosus, ulcerative colitis, psoriasis and asthma by detecting the expression level of one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human DNA probe used to monitor expression of diagnostic genes SeqID930.

tools for the management of, in particular, patients with systemic lupus erythematosis (SLE) or rheumatoid arthritis (RA). Accordingly, the present invention describes a method for determining the levels of multiple differentially expressed genes of a patient, in a concerted manner, in order to achieve an improved diagnostic assay with sensitivity and specificity for the disease in question. As such, these genes are useful for the disease in fuestion. As such, these genes are including cholecystitis, Sjogren's disease, CREST syndrome, scleroderma, ankylosing spondylitis, ulcerative colitis, primary sclerosing cholangitis, appendicitis, diverticulitis, and primary biliary sclerosis. This oligonucleotide is a human DNA probe used to monitor the expression level of the differentially expressed diagnostic genes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the identification of genes that have a clinical utility as diagnostic tools for the management of, in particular, patients with systemic lup erythematosis (SLE) or rheumatoid arthritis (RA). Screening for sequence-directed DNA-binding molecules comprises adding test molecule to a test system composed of a DNA-binding protein and a duplex DNA test oligonuclectide having adjacent screening and test

SEQ ID NO 214; 283pp; English

binding to a selected test sequence in a duplex DNA. The above method comprises: constructing a duplex DNA test oligonucleotide having a screening sequence adjacent to a selected test sequence, where a DNA-binding protein is effective to bind to the screening sequence with a binding affinity that is substantially independent of such test sequence but where DNA protein binding to the screening sequence is sensitive t The invention describes a method for screening for molecules capable sensitive to ဓ္

```
binding of test molecules to such test sequence; adding a test motobe screened to a test system composed of the DNA-binding protein anothe the duplex DNA test oligonucleotide having the screening and test sequences adjacent one another; incubating the molecule in the test system for a period sufficient to permit binding of the molecule being tested to the test sequence in the duplex DNA; and comparing the amount of binding protein bound to the duplex DNA before and after the adding. The method is useful in screening libraries of synthetic or biological compounds for their ability to bind DNA test sequences. The method may also be used in characterising the preferred binding sequences of any selected DNA-binding molecule. This sequence represents a test sequence corresponding to a promoter target of a human gene.

The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug targetting. Sequences AAZ55491-Z55498, AAZ55513-Z55515 and AAZ5581-Z55608 represent PCR primers used in isolation, amplification and cloning of CDNAs encoding the immunoregulatory proteins of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CRNA was extracted from genital lesions, reverse transcribed to produce CDNA and then the cDNA was used as the template for PCR amplification of CV various cytokines using the primers in AAT38964- AAT39005. To confirm the CRNA template for produce identity of amplified cDNA, digoxigenin- labelled probes specific for care each cytokine (see AAT39006-T39021) were hybridised with Southern blots of amplified sequences. The expression profile for regressing and non-corressing warts was established and compared to cytokine expression patterns in normal cervical tissue. Results showed that interleukin 12 is parely expressed (if at all) in non-regressing warts, but is expressed in CR barely expressed (if at all) in non-regressing warts, but is expressed in CR cregressing warts. This suggests a central role for II-12 in wart regressing warts. This suggests a central role for II-12 in wart conditions adjuvant) for treating papilloma virus-associated lesions such as CR condyloma acuminata (anogenital warts) caused by human papilloma virus type 6 (HPV-6) and/or HPV-11 and more generally for treatment of tumours associated with HPV16 and HPV18 infection e.g. anogenital, cutaneous,

                                                                                                                                                        CC response after T-cell receptor stimulation. Naive T-cells which CC have recently emigrated from the thymus and have a predominantly proliferative response when exposed to cognate antigens for the first time. These primers can be used in the method of the invention. The cC method of the invention is for evaluating the efficacy of a drug to stimulate the production of naive T-cells. The method comprises obtaining a sample containing peripheral blood mononuclear cells from a subject. A cc suitable dose of a drug is then administered before a second sample is cobtained. The T-cells in each populations are then isolated from the samples. The cc unmber of naive T-cells in each population is then determined by cc reactive with naive T-cell surface proteins. If the number of naive T-cell surface proteins. If the number of naive T-cells in the second population is significantly greater than the number cc in the first, then the drug is identified as being effective. The method cc and be used to identify naive T-cell count elevating drugs, particularly in immuno-compromised subjects, e.g. HIV positive subjects, cancer patients or individuals with viral infection or autoimmune disease
                                                                                              Query Match

This sequence and AAT47000 are primers for the interleukin-5 gene. CD8 cells provide cell mediated immunity through both cytotoxic and suppressor mechanisms. The naive subset of CD8 cells expresses the CD45RA surface marker, and make a relatively poor cytokine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PCR; polymerase chain reaction; primer; amplify; beta-actin; IL-2; IL-4; interferon-gamma; interleukin-2; peripheral blood mononuclear cell; IL-5; granulocyte macrophage colony stimulating factor; GM-CSF; cytokine; PBMC; CDB cell; T-cell; cell mediated immunity; cytotoxic; CD5RA; IL-10; HIV; surface marker; naive T-cell; thymus; proliferative response; antibody; cognate antigen; immuno-compromised; cancer; viral infection;
                                                                                                                                                        Sequence

The present sequence is an antisense oligonucleotide HUMILSASS specific for the human IL5. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary diseases bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby
                                                                                                                                                                                                                                                                                                                        preventing adenosine-induced bronchoconstriction in patients reactive airways
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       adenosine-free

The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukanias, lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer, pancreatic cancer, hepaticcellular carcinoma, kidney cancer, melanoma, hepatic metastases, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  pulmonary hypertension; pulmonary vasoconstriction; emphysema;
chronic obstructive pulmonary disease; leukemia; lymphoma; carcinoma;

Human; adenosine receptor; low adenosine antisense oligonucleotide;

```
The present invention describes a new composition comprising an antisense CC oligonuclectide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or CC inflammation. The ON can have antiinflammatory, antiallergic, and/or CC useful for the treatment of diseases associated with inflammation. CC impaired aliways, including lung disease and diseases whose secondary ceffects afflict the lungs of a subject. They can be used for treating CC effects afflict the lungs of a subject. They can be used for treating CC impeded respiration, respiratory distress syndrome, pain, cystic impeded respiration, respiratory distress syndrome, pain, cystic cfibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, CC carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the createse of deoxyademosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present the present on the present on the present on the present on the previously named sequences. SEQ ID NO:1 to 2815, and then the last 185 sequences given in the disclosure of the present invention do not match contains. N.B.

Sequences given in the disclosure of the present invention do not match contains.

The present invention describes low adenosine (A) content antisense coligonucleotides and compositions (I) comprising them. In the antisense coligonucleotides the A is replaced by a 'Universal' or alternative base. (C(I) can have respiratory, bronchodilator, antiinflammatory, analgesic, the antisense oligonucleotides and (I) can be used to down-regulate the cexpression and or activity of target polypeptides associated with colling/respiratory disorders and malignancies, such as stimulating and cativating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cyrokines and compositions proteins, adenosine receptors, binding proteins, adenosine receptors, bradykinin receptors, central compositions, contral nervous and non-nervous system exceptors, central nervous system (C(NS)) and peripheral nervous and non-nervous system peptide receptors, binding proteins and malignancy associated proteins. The cantisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasocated with a disease or condition selected from pulmonary vasocated with a disease or condition, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary colleges, asthma, impeded respiration, pulmonary viscetions, bronchitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysema; pulmonary transplantation rejection; chronic obstructive pulmonary disease; pulmonary infection; bronchitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           human; airway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antiinflammatory; immunosuppressive; antiasthmatic; analgesic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; impeded respiration;
pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAF18434 to AAF21543 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 14; Page 208; 1592pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         á
                                                                                                                         CC junctions of genes encoding a polypoptide associated with lung and/or CC nasal airway dysfunction and a second active agent comprising an CC antiinflammatory steroid and ubiquinone. A composition of the invention CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive, and cytostatic activity. The composition may have a CC use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an CC antiinflammatory steroid in a subject, for reducing or depleting levels of cf. or reducing sensitivity to adenosine, reducing levels of adenosine creceptor, producing bronchodilation, increasing levels of adenosine composition inflammation, lung allargies, or a respiratory disease or condition. CC lung surfactant in a subject s tissue, or treating bronchoconstriction, CC lung inflammation, lung allargies, or a respiratory disease or condition. CC Note: The sequence data for this patent is not represented in the printed constriction, but was obtained in electronic format directly from WIPO are ferroity for the control of the printed constriction, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel pharmaceutical composition, which the first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking region, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; antisense; lung dysfunction; nasal airway dysfunction; antiinflammatory steroid; ubiquinone; antiinflammatory; antiallergic; antiasthmatic; hypotensive; immunosuppressive; cytostatic; gene therapy; antisense gene therapy; respiratory; lung; adenosine sensitivity; adenosine receptor; bronchodilation; bronchoconstriction; lung allergy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                  CC composition of light production and production and production or traget way or composition of the invention and or composition of target polypeptide production and administered to a mammal. The collection of a target polypeptide associated with lung airway or lung CC expression of a target polypeptide associated with lung airway or lung CC expression of a target polypeptide associated with lung airway or lung CC dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery CC device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition CC of the invention has antiallergic, antiinflammatory, antiasthmatic, analysesic, hypotensive, immunosuppressive and cytostatic activity, is a Cc treating a respiratory, lung or malignant disease. The administered CC composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to CC reduce the amount of target polypeptide present in the lungs. The composition, allergies and/or bonchoconstriction and/or lung CC inflammation, allergies and/or surfactant hypoproduction are associated CC with a disease or condition such as milmonary vasoconstriction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

                                  The present invention describes a method for concentrating a gene in a trace amount from a DNA sample containing the gene by separating it from a gene in a large quantity comprises dividing the sample into driver and target DNA fractions, mixing and forming single-stranded DNAs from them, hybridisation to produce a double-stranded DNA, and repeating the steps. The method can be used for concentrating a trace amount of an expressed gene even from large amounts of a (un)known gene, which is useful in screening industrial enzymes, pharmaceutical and agrochemical leads from nature e.g. soil, river and lake water, as well as antibiotics, and identifying parasitic and infectious microorganisms for disease diagnosis. The present sequence represents a PCR primer which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     hypertension, emphysema, chronic obstructive pulmonary disease, pulmonar transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby,

                                                                                                                                             murine B- and T-cells but can express human immunity cells such as T-cells and monocytes in their peripheral lymphoid compartments. These mice are useful as models for the pathogenesis of human disease, e.g. for assaying the dissemination of HIV. The primers are used to assay the effect of HIV on cytokine gene expression e.g. as a model for human patients with HIV. The primers AAQ86376-7 are used to detect the expression of the interleukin-5 gene, using cDNA derived from mRNA extracted from the long bones of BCTD-HUBM mice. (Updated on 25-MAR-2003)
                                                                                                                                                                                                                                                           Primers AAQ86362-83 and AAQ87677-82 were used to detect the expression of various cycokines genes in HIV infected B-cell, T-cell deficient (BCTD) mice which have been transformed with human thymus, liver tissue and bone marrow implants (BCTD-huBM mice). These mice are immune-deficient for

CC about 70% identical to the human conserved non-coding sequence (CNS)-1 clear region of chromosome 5931 containing interleukin (II) 4, ILS and CC IL 13). Optionally, the nucleic acid has 70% identity to a human CNS-2 to CC CNS-16 or mouse CNS-1 to CNS-16 or their complements. Also included are: CC (1) an expression cassette comprising a CNS-1 sequence operably linked to CRS-16 or mouse CNS-1 sequence; (3) an expression cassette comprising a CNS-1 sequence operably linked to CRS-16 or their complements. Also included are: CC (1) an expression cassette comprising a CNS-1 sequence operably linked to CRS-16 or their complements. Also included are: CRS-16 or comprising a CNS-1 sequence operably linked to CRS-16 or comprising an IL-13 gene, and a CNS-1 sequence; (3) an expression cassette comprising an IL-13 gene and a CNS-1 sequence; (4) an expression cassette comprising an IL-13 gene and lacking a CNS-1 sequence; (5) a T cell CC comprising one of the expression cassettes; (6) a non-human transgenic comprising one of the expression cassettes; (6) a non-human transgenic animal where a CNS-1 sequence; (5) a T cell; and (7) CC animal comprising one of the expression cassettes; (6) a non-human transgenic animal where a CNS-1 sequence is deleted from its CC compound. The nucleic acid is useful for identifying a compound that the transcription factor to a CNS-1 sequence, in antisones sequence of the CNS sequence, an antisones sequence of the CNS sequence, an antisones sequence of the CNS sequence, or a small compression. The compound is an antisones sequence of the CNS sequence, or a small compression cassette is sequence of the compound that modulating expression cassette is sequence of the CNS sequence. The compounds that modulate functions of CNS sequence is a cuseful for making two lines of non-human transgenic animals that compound is an expression cassette is sequence is a compound on a transgenic animals are useful as for various therapeutic modalities. The present sequence is a compound of the compound of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABX75428/c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated nucleic acids which are locus control region elements interleukin gene cluster region of chromosome, referred as conserved coding sequences, useful for modulating expression of cytokine genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CNS; conserved non-coding region; 88; cytokine; interleukin 4; IL-4; interleukin 5; IL-5; interleukin 13; IL-13; chromosome 5q31; LCR; locus control region; interleukin gene cluster; transcription factor; transgenic; PCR; primer; RT-PCR; reverse transcriptase PCR; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid molecule comprising length of about 100 nucleotides of less, which has a sequence at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 4;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cluster from chromosome 5q31 with and without CNS-1
                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of the canine interleukin-5 (IL-5) protein. This can be used to treat allergies, cancer and inflammatory reactions in dogs. The present sequence is a PCR primer used to obtain the sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                       Guo H,
                                                                                                                                                                                                                                                                                                               Novel canine interleukin 5 polynucleotide and polypeptides are used generating antibodies which are useful in treating allergies in dogs

CC acids (NAs) comprising contacting a NA sample from a physiological CC source, with a pool of 50 distinct gene specific primer bas a sequence complementary to a distinct mana. CC gene specific primer has a sequence complementary to a distinct mana. CC each labeled NA is generated using a single gene specific primer. The CC method is useful for producing a sub-population of labeled NAs which is CC useful for analysing the differences in the RNA profiles between several CC different physiological sources, where the method comprises producing CC subpopulation of labeled NAs for the different physiological sources, cC comprising the populations for each physiological sources, cC comprising the populations for each physiological sources, cC comprising the population, where the comparison is preferably CC performed by hybridising the labeled NAs for each of the distinct CC surface of a substrate to produce a hybridisation pattern for each of the sources, and comparing the patterns for each of the sources, where CC differential gene expression assays are utilised in differential content tissue or different tissue or subtissue types. The present sequence is a content sequence data for this patent did not form part of the printed content calculum, but was obtained in electronic format directly from USPTO at high the part and to content of the printed content calculum, but was obtained in electronic format directly from USPTO at high the population of content of the printed content calculum and the method of the printed content calculum and the method of the printed content calculum and only format directly from USPTO at high the pattern and the content of the printed content calculum and the method of the printed content calculum and the met
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Producing sub-population of labeled nucleic acids, useful for analyzing differences in RNA profiles between several different physiological sources, using set of distinct gene specific primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Primer; 88; DNA microarray; differential expression analysis; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to producing a sub-population of labeled nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a genetically modified human microglia cell maintained stably in vitro which has (i) has demonstrable phagocytic properties; (ii) produces progeny continuously in culture; (iii) presents CD1b and CD68 as surface antigens; and (iv) contains human genomic DNA that has been genetically modified to include a viral vector carrying at least one DNA segment encoding an exogenous gene for intracellular expression. The microglia cell line is useful for screening compounds for the treatment of autoimmune disease, and is used in the treatment of a neurodegenerative disorder e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, stroke, spinal cord injuries, ataxia, brain trauma, multiple sclerosis and AIDS-(acquired immunodeficiency syndrome)-dementia. The cell line is also useful for isolating neurotoxic or neurotrophic molecules naturally produced by

The present invention relates to a method of quantifying in vivo RNA from CC a biological sample. This involves collecting the biological sample in a cumpound inhibiting RNA degradation and/or gene CC induction, forming a precipitate comprising nucleic acids, separating the precipitate from the supernatant, dissolving the precipitate using a CC buffer, forming a suspension, isolating nucleic acids from the suspension of the precipitate using a compound inhibiting nucleic acids from the suspension of the precipitate using a natural formation (RT)-PCR using an automated device, dispersing or distributing a reagent mix for constraint of the nucleic acids isolated within the dispersed reagent mix constraints an automated device and determining the in vivo levels of transcripts using the nucleic acid solated within the dispersed reagent mix constraints and the nucleic acid and RT-PCR reagent mix of the previous step in an automated setup. The method is useful for monitoring or constraints and the suspension of the previous step in an automated setup. The method is useful for monitoring or constraints and accompanies in a biological sample or for producing a medicament for treating immune considered disease, e.g., autoimmunity, rheumatoid arthritis, multiple conjugated and constraints and and constraints allergy, grafit conjugated and constraints and and constraints and con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 medicament for treating immune rel

present invention describes a method for concentrating

a gene in

amounts of (un)known genes, useful in screening industrial enzymes, pharmaceutical and agrochemical leads from nature. Method for concentrating trace genes expressed even in presence of large amounts of (un)known genes, useful in screening industrial enzymes, and WPI; 2002-508798/54.

trace amount from a DNA sample containing the gene by separating it from a gene in a large quantity comprises dividing the sample into driver and target DNA fractions, mixing and forming single-stranded DNAs from them, hybridisation to produce a double-stranded DNA, and repeating the steps. The method can be used for concentrating a trace amount of an expressed gene even from large amounts of a (un)known gene, which is useful in screening industrial enzymes, pharmaceutical and agrochemical leads from nature e.g. soil, river and lake water, as well as antibiotics, and identifying parasitic and infectious microorganisms for disease diagnosis. The present sequence represents a PCR primer which is used in

Nucleic acids encoding immunoregulatory proteins from cats or useful for treating or preventing e.g. tumors or autoimmune di

Example 5A; Page 106; 264pp; English

•

The invention relates to canine interleukin-4 (IL-4), canine or feline CC Plt-3 ligand, canine or feline CD40, canine or feline CD154 (CD40). CC ligand), canine IL-5, canine IL-13, feline interferon-alpha (IFN-alpha) CC and feline granulocyte macrophage colony-etimulating factor (GMCSF), and cucleotides which encode these immunoregulatory proteins. The proteins, cc used as vaccines for therapeutic or prophylactic antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune CC response in animals (particularly cats, dogs, horses and humans). They CC may be used to treat autoimmune or infectious diseases including CC calso be used for the recombinant production of a protein, while cas be used for the recombinant production of a protein, while CC cas sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug targetting. Sequences AAZ55491-Z55498, AAZ55515 and AAZ55581-CC 255608 represent PCR primers used in isolation, amplification and cloning of cDNAs encoding the immunoregulatory proteins of the invention.

Treatment of airway diseases such as asthma - by topically applying adenosine-free antisense oligo:nucleotide to airway epithelium of subject.

Claim 5; Page 31; 71pp; English.

A method for treating airway disease in a subject has been produced, which involves the topical administration of an essentially adenosine free antisense oligonucleotide (ON) to the airway epithelium of the subject. The present sequence is an antisense oligonucleotide HUMILSAS specific for the human IL5. The method can be used to treat airway HUMIL5AS5

និក្ខិតិក្រុង និង

diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine-induced bronchoconstriction in patients with hyper-

The specification describes antisense oligonucleotides (AAX52869-X55271) directed against at least 2 mRNAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, gene initiation codons, genomic flanking regions, intron-exon borders, the 5'-end, the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one or more diseases, conditions or mixtures. The antisense oligonucleotides may be derived from sequences AAX5512-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases, pulmonary vasoconstriction, inflammation, allergic rhinitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          acute asthma; allergy; asthma; impeded respiration; respiratory distress syndrome; pain; cystic fibrosis; pulmonary hypertension; pulmonary vasoconstriction; emphysema; chronic obstructive pulmonary disease; leukemia; lymphoma; carcinoma; colon cancer; brast cancer; lung cancer; pancreatic cancer; hepaticcellular carcinoma; kidney cancer; melanoma; hepatic metastasis;

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenostriction, to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstruction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antiallergic; antiasthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction; asthma; respiratory distress syndrome; pain; cystic fibrosis; emphysema; pulmonary hypertension; chronic obstructive pulmonary disease; COPD; cancer; leukaemia; lymphoma; carcinoma; metastasis; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to AAA33992) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              14-MAR-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
```

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base

Low adenosine (A) content antisense oligonucleotides which adenosine receptors during metabolism, useful e.g. for trea and respiratory obstructions.

treating 0

not trigger ng cancers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. CC The antisense oligonucleotides and (I) can be used to down-regulate the CC expression and or activity of target polypeptides associated with CC lung/respiratory disorders and malignancies, such as stimulating and CC ethemokines, peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and CC chemokine receptors, adenosine receptors, cytokine and CC chemokine receptors, adenosine receptors, brinding proteins, adhesion molecules and their receptors, cytokine and CC receptors, CNS and peripheral nervous and non-nervous system CC receptors, brinding proteins and malignancy associated proteins. The CC including respiratory obstruction (especially pulmonary obstruction CC including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(les) and/or candition selected from pulmonary vasconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary (CC pulmonary transplantation of AAF21543 represent human polynucleotide of the present and antisense oligonucleotides used in the exemplification of the present human polynucleotide conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC The invention relates to a genetically modified human microglia cell CC maintained stably in vitro which has (i) has demonstrable phagocytic CC properties; (ii) produces progeny continuously in culture; (iii) presents CC CD11b and CD68 as surface antigens; and (iv) contains human genomic DNA CC that has been genetically modified to include a viral vector carrying at CC least one DNA segment encoding an exogenous gene for intracellular CC expression. The microglia cell line is useful for screening compounds for CC the treatment of autoimmune disease, and is used in the treatment of a CC neurodegenerative disorder e.g. Alzheimer's disease, Parkinson's disease, CC Huntington's disease, amyotrorophic lateral sclerosis and AIDS-(acquired CC injuries, ataxia, brain trauma, multiple sclerosis and AIDS-(acquired CC immunodeficiency syndrome) dementia. The cell line is also useful for CC isolating neurotoxic or neurotrophic molecules naturally produced by CC human microglia. The present sequence is an RT-PCR (reverse transcriptase CC PCR) primer which amplifies a segment of the mRNA for an expressed marker CC gene, used to characterise the cell line
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                    junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or the prophylactic or the sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of beinguinone or the prophylactic or the sensitivity to adenosine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel pharmaceutical composition, which has first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5 or 3 end genomic flanking regions, 5 and 3 intron-exon junctions, or regions within 2-10 nucleotides of
                                                                                                                                                                                                                                                                lung surfactant in a subject's tissue, or treating bronchoconstriction, lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; SEQ ID

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC surfactant depletion or hyposecretion, when administered to a mammal. The Coligonucleotides are derived from a gene encoding or regulating cexpression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. CC The invention also describes a kit, that comprises: (a) a delivery cd device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition confidence of the corresponding mRNA. CC instructions for adding a carrier and for use of the kit. The composition confidence of the kit. The composition confidence or composition of the composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction and/or lung cinflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vascoonstriction, confidence of the machinest present in the target mRNA or to the stress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymdines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system of the oligonucleotides into products that free adenosine into the system of the content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system of the content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system of the content of the anti-sense environment and thereby, to prevent any unwanted effects due to 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

of the invention. Disclosed in the invention is human RAD50 (hRAD50) which is involved in DNA repair and has tumour suppression activity, and can be used to detect predisposition to decrease the risk of or treat cancers, e.g. acute myeloid leukaemia, myelodysplastic syndrome, therapy related myelodysplastic syndrome, therapy related acute myeloid leukaemia, refractory anaemia with excess blasts. Also disclosed in this invention are human Septin-2 homologues which may be used as targets for cancer therapies and central nervous system directed treatment methods, and to measure the proliferative potential of selected cell types
                                                                                                                                                                                                                                                                                                      Human tumour suppressor gene RAD50 - useful to detect predisposition decrease risk of and treat cancer, also Septin-2 homologues.

```

PCR primers AAV59945-46 were used to identify cDNA encoding human cytokine interleukin (IL) from different cDNA pools, to provide an estimate of the degree to which the cytokine transcript is present. was isolated from activated T-cells, and converted to cDNA prior to

                 The sequences given in AAT50760-69 are primers which were used to amplify the sequences encoding ovine interleukin-5 (II-5), and interleukin-12 (II-7) and interleukin-12 (II-7) and interleukin-12 (II-7) are used to treat and/or prevent infections in livestock (esp. cows and sheep), particularly where the animals are stressed, e.g. during transport. II-5 and III-12 can also be used as adjuvants in vaccines for veterinary use (partic. weakly immunogenic subunit or synthetic peptide vaccines). They may also be used to treat cancer, immunosuppression and allergy, to enhance/suppress the reproductive system and to promote growth or early maturity. Optionally interleukin can be delivered from constructs or delivery cells and antibodies are useful in enzyme immunoassays for rapid diagnosis of infection. The interleukins are immunopotentiators, especially II-5 promotes growth of early haematopoietic progenitor cells and generation of a further archive colls for the progenitor cells and generation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        analogues of the yeast RAD50, the Drosophila Septin-2 and Acyl-CoA synthetase. The proteins have immunomodulatory activity. The nucleic acids and proteins can be used to identify activated T-cells in a sample population. They can also be used to isolate and identify sequences encoding other proteins or other compounds having immunomodulatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        03-JAN-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunosuppression; allergy; reproductive system; growth; early maturity;

X The invention relates to comparing one or more nucleic acid targets within two or more samples comprising converting two or more complex concelled acid samples into a single collection of normalised target collection of normalised target collection of normalised target collection of normalised target inthe acid samples. The method comprises: (a) obtaining at cleast a first nucleic and a second sample, each (potentially) having at comprise a first nucleic acid target; (b) preparing at least a first tagged comprising a first differentiation domain to the first nucleic acid tagged comprising a first sample (if the first nucleic acid target is present in the first sample); (c) preparing at least a second tagged nucleic acid carget of the first sample (if the first nucleic acid target is present in the first nucleic acid target is present condessed and comparing at least a second nucleic acid target of the second differentiation domain to the first nucleic acid target of the second condessed sample (if the first nucleic acid target is present in the second condessed sample); (d) mixing the first tagged nucleic acid sample and the second condessed nucleic acid sample mixture; (e) adding a complementation of at least a first target specific primer to the sample mixture by a process comprising and the sample mixture by a process comprising and the sample mixture by a process comprising concentration of at least a first target specific primer to the sample mixture by a process comprising and concentration of at least a first target specific primer to the sample mixture by a process comprising and concentration of at least a first product a limited concentration of at least a first target specific primer to the sample mixture by a process comprising and concentration of at least a first target specific primer to the sample mixture by a process comprising and concentration of at least a se nucleic acids complementary

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         transpet of the first sample, if the first nucleic acid target is present in the first sample, and a limited concentration of second product nucleic acids complementary to the first nucleic acid target of the second sample, if the first nucleic acid target is present in the second sample, where any first product nucleic acids comprise the first differentiation domain and a section of the first nucleic acid target from the first sample and any second product nucleic acids comprise the second differentiation domain and a section of the first nucleic acid target from the second sample; (g) differentiating any first product nucleic acids from any second product nucleic acids; if any, the amount of the first nucleic acid target in the first sample, if any, the amount of the first nucleic acid target in the second sample, if any, the method is useful for comparing one or more nucleic acid targets within two or more samples, or the competitive analysis nucleic acid camples and is particularly useful for amplifying rare or limiting amounts of nucleic acid sequences for quantitative analysis. The present sequence is a PCR primer used to amplify mouse interleukin cONA in order to make a membrane bound array for use in an experiment demonstrating the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
```

This invention relates to a novel method for comparing one or more nucleic acid targets within two or more samples. The method comprises preparing a sample mixture by obtaining at least a first sample and a second sample, each potentially with at least a first nucleic acid target and mixing the first nucleic acid sample to create a sample mixture. The method of the invention is useful for fractionating nucleic acid samples into target fractions then using

                   This artificial sequence is an oligomer containing the palindromic sequence from human interleukin 5 (hIL-5) promoter. These oligomers can be used as inhibitors of transcription of cytokines. They can be used in the therapy of a disease associated with excessive production in vivo of a cytokine, the gene for which corresponds to the palindrome-containing sequence in (I) in its 5'-non-coding region, or which can be alleviated by reducing the production in vivo of the cytokine (claimed). In particular, the cytokine may be interleukin-5 (IL-5) and the associated disease is asthma or the cytokine may be tumour necrosis factor- alpha and the associated disease is rheumatoid arthritis (claimed). They can also be used for treating e.g. allergy, chronic obstructive airways disease, inflammation, autoimmune diseases, cancer, angina, fibrosis, wound scarring, septic shock syndrome or excessive cellular proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Artificial from hIL-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nucleic acids amplification to quantitatively assess target within each fraction. This method as compared facilitates the analysis of more target sequences to acid profiles of limited tissue samples. The present a PCR primer used in the method of the invention

                                                                                                                                                                                                                    This is an IL-5 mRNA target sequence (nucleotide no. 33) of an enzymati RNA molecule (ribozyme) which cleaves mRNA associated with the development or maintenance of a psoriatic or asthmatic condition. The concm. of the ribozyme necessary to effect a therapeutic treatment is lower than that of an antisense oligonucleotide and the specificity of action is higher. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                     Sequence 22
                                                                                                                          This is an II-5 mRNA target sequence (nucleotide no. 158) of an enzymat RNA molecule (ribozyme) which cleaves mRNA associated with the development or maintenance of a psoriatic or asthmatic condition. The concm. of the ribozyme necessary to effect a therapeutic treatment is lower than that of an antisense oligonucleotide and the specificity of action is higher. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                             Enzymatic RNA molecules which cleave mRNA - used to treat or inflammatory, arthritic, stenotic or cardiovascular diseases conditions.

PREI inhibits the activity of the hII-5 promoter and therefore II-5 expression. PREI can be used to modulate II-5 activity by acting on the corresponding region of the hII-5 promoter, especially in cases of asthma and eosinophilia or in immunocompromised subjects. PREI specifically inhibits transcription from the II-5 promoter, as no such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example

                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      expresses the CD4SRA surface marker, and make a relatively poor cytokine response after T-cell receptor stimulation. Naive T-cells are cells which have recently emigrated from the thymus and have a predominantly proliferative response when exposed to cognate antigens for the first time. These primers can be used in the method of the invention. The method of the invention is for evaluating the efficacy of a drug to stimulate the production of naive T-cells. The method comprises obtaining a sample containing peripheral blood mononuclear cells from a subject. A suitable dose of a drug is then administered before a second sample is obtained. The T-cells in each populations are then isolated from the samples. The number of naive T-cells in each population is then determined by detecting T-cell immunoreactivity with at least 2 antibodies, selectively calls in the second population is significantly greater than the number in the first, then the drug is identified as being effective. The method can be used to identify naive T-cell count elevating drugs, particularly in immuno-compromised subjects, e.g. HIV positive subjects, cancer patients or individuals with viral infection or autoimmune disease
                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                          Query Match

This sequence and AAT47001 are primers for the interleukin-5 gene. CDB cells provide cell mediated immunity through both cytotoxic and suppressor mechanisms. The naive subset of CDB cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO9712244-A1

The present sequence is an antisense oligonuclectide HUMIL5AS6 specific for the human IL5. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON, its liberation upon antisense degradation is prevented, thereby preventing adenosine-induced bronchoconstriction in patients with hyperreactive airways
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treatment of airway diseases such as asthma - adenosine-free antisense oligo:nucleotide to a subject.

The antisense oligonucleotides may be derived from sequences AAX55272-74. These multiple target oligonucleotides (specifically AAX55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, including lung diseases pulmonary vasoconstriction, inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as levkenias 1/mphonas, carcinomas e. colon cancer, breast cancer, lung cancer, pancreatic cancer, colon cancer, breast cancer, lung cancer, melanoma, hepatic metastases, hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, well as all types of cancers which may metastasize or have metastasized well as all types of cancers which may metastasize or have

cc impeded respiration, respiratory distress syndrame, pain, cystic (fibrosis, pilmonary hypertension, emphysema, chronic obstructive cultive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, cc carcinomas, and cancers which may metastasise to the lungs, including carcinomas, and cancers which may metastasise to the lungs, including cc breast and prostate cancer. The A-containing ONs break down with the cc Ns reduces side effects. The A-containing ONs break down with the cc branchoconstriction and inflammation. AAA32313 to AAA35312 represent the nucleotide sequences given in the sequence listing from the present thrention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 2815, and then the last 185 cf. com the previously named sequences. SEQ ID NO:1 to 1680 (AAA32323 to CAAA3392) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match cup with their corresponding SEQ ID NO: sequences given in the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a new composition comprising an antisense oligonuclectide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired already, including lung diseases and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, and the conditions of the conditions 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstruction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or

polynucleotide fragment #1154.

14-MAR-2001 AAF19587

(first entry)

Low adenosine antisense oligonucleotide; phosphorothioate; allergy; human; alrway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antiinflammatory; immunosuppressive; antiasthmatic; analgesic; hypotensive; cytostatic; respiratory obstruction, pulmonary obstruction; impeded respiration; surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysems; pulmonary transplantation rejection; pulmonary hypertension; emphysems; pulmonary transplantation rejection; chronic obstructive cancer; ss. pulmonary n rejection; bronchitie;

                                                                                                                                                                                                                                                                                                 ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and cativating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous and non-nervous system (CNS) and peripheral nervous and non-nervous system receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or
                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                 This invention describes a novel method for the detection of products of a nucleic acid (NA) amplification reaction (AR) using at least 2 primers where one of the primers (I) contains a 5'-homo-tail sequence, a probe binding sequence designated a primer-integrated reporter sequence (PIRS) and a sequence specific for the NA to be amplified, and a labeled probe (III). The method is used for the diagnosis of diseases, especially leukemia, meningitis, encephalitis or cytokine response. The need for expensive probe oligonucleotide additives is avoided
                                                                                                                                                                                                                                        Detecting products of nucleic acid amplification, useful for diagnosis of e.g. leukemia, comprising two primers, one containing a primer-integrated reporter sequence, and labeled probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Unidentified.

cc inntiation codon, coding region, 5' or 3' end genomic flanking regions, CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of CC junctions of genes encoding a polypoptide associated with lung and/or CC nasal airway dysfunction and a second active agent comprising an CC antiinflammatory steroid and ubiquinone. A composition of the invention CC has antiinflammatory, antiallargic, antisathmatic, hypotensive, CC immunosuppressive, and cytostatic activity. The composition may have a CC use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an CC antiinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine CC receptor, producing bronchodilation, increasing levels of adenosine CC lung surfactant in a subject's tissue, or treating bronchoconstriction, CC lung inflammation, lung allergies, or a respiratory disease or condition. CC Note: The sequence data for this pattent is not represented in the printed Specification, but was obtained in electronic format directly from WIPO CC at ftp.wipo.int/pub/published_pct_sequences

This invention describes a novel method for the detection of products of a nucleic acid (NA) amplification reaction (AR) using at least 2 primers, where one of the primers (I) contains a 5'-homo-tail sequence, a probe binding sequence designated a primer-integrated reporter sequence (PIRS) and a sequence specific for the NA to be amplified, and a labeled probe (III). The method is used for the diagnosis of diseases, especially leukemia, meningitis, encephalitis or cytokine response. The need for expensive probe oligonucleotide additives is avoided

Detecting products of nucleic acid amplification, useful for diagnosis e.g. leukemia, comprising two primers, one containing a primer-integrat reporter sequence, and labeled probe.

a primer-integrated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA.

CC The invention also describes a kit, that comprises: (a) a delivery comprises: (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition comprises: (c) instructions for adding a carrier and for use of the kit. The composition comprises: (c) analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition such as pulmonary vasoconstriction are associated with a disease or condition such as pulmonary vasoconstriction are associated with a disease or condition such as pulmonary vasoconstriction, respiratory composition, allergies, asthma, impeded respiration, respiratory composition, allergies, asthma, impeded respiration, respiratory composition, allergies, asthma, impeded respiration, respiratory composition such as pulmonary vasoconstriction are associated with a disease or condition such as pulmonary vasoconstriction are associated with a disease or condition such as pulmonary vasoconstriction composition, allergies, asthma, impeded respiration, respiratory composition, allergies, asthma, impeded respiration, respiratory pulmonary infections, bronchitis or cancer.

The reduced adenosine content of the anti-sense oligos corresponding to the oligonary brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it

                                                                                                          various cytokines genes in HIV infected B-cell, T-cell deficient (BCTI marce which have been transformed with human thymus, liver tissue and I marrow implants (BCTD-huBM mice). These mice are immune-deficient for murine B- and T-cells but can express human immunity cells such as T-cells and monocytes in their peripheral lymphoid compartments. These rare useful as models for the pathogenesis of human disease, e.g. for assaying the dissemination of HIV. The primers are used to assay the effect of HIV on cytokine gene expression e.g. as a model for human patients with HIV. The primers AAQ86376-7 are used to detect the expression of the interleukin-5 gene, using cDNA derived from mRNA extracted from the long bones of BCTD-HuBM mice. (Updated on 25-MAR-2)

cDNA and then the cDNA was used as the template for PCR amplification of various cytokines using the primers in AAT39964- AAT39905. To confirm the identity of amplified cDNA, digoxigenin-labelled probes specific for each cytokine (see AAT3906-T39021) were hybridised with Southern blots of amplified sequences. The expression profile for regressing and non-regressing warts was established and compared to cytokine expression patterns in normal cervical tissue. Results showed that interleukin 12 is barely expressed (if at all) in non-regressing warts, but is expressed in regressing warts. This suggests a central role for IL-12 in wart regression. It has been found that IL-12 can be used (especially as a vaccine adjuvant) for treating papilloma virus-sesociated lesions such as condyloma acuminata (anogenital warts) caused by human papilloma virus sesociated with HPV16 and/or HPV-11 and more generally for treatment of tumours associated with HPV16 and HPV18 infection e.g. anogenital, cutaneous,

                               The present sequence is the human interleukin-5 (hIL-5) promoter wild type palindromic regulatory element (wtPRI), which inhibits the activity of the hIL-5 promoter and therefore IL-5 expression. wtPRI can be used to modulate IL-5 activity by acting on the corresponding region of the hIL-5 promoter, especially in cases of asthma and eosinophilia or in immuncompromised subjects. wtPRI specifically inhibits transcription from the IL-5 promoter, as no such sequence is present in genes encoding

                                                                                                                                            A method for treating airway disease in a subject has been produced, which involves the topical administration of an essentially adenosine free antisense oligonucleotide (ON) to the airway epithelium of the subject. The present sequence is an antisense oligonucleotide HUMILSAS2 specific for the human ILS. The method can be used to treat airway diseases such as cystic fibrosis, asthma, chronic obstructive pulmonary disease, bronchitis and other airway diseases characterised by an inflammatory response. By eliminating adenosine from the antisense ON,
                                                                                                                                                                                                                                                                                 Treatment of airway diseases such as asthma - by topically applying adenosine-free antisense oligo:nucleotide to airway epithelium of
                                                                                        Sequence
                                                                                                                       its liberation upon antisense degradation is prepreventing adenosine-induced bronchoconstriction

Disclosed in the invention is human RAD50 (hRAD50) which is involved in DNA repair and has tumour suppression activity, and can be used to detect predisposition to, decrease the risk of or treat cancers, e.g. acute myeloid leukaemia, myelodysplastic syndrome, therapy related myelodysplastic syndrome, therapy related acute myeloid leukaemia, refractory anaemia or refractory anaemia with excess blasts. Also disclosed in this invention are human Septin-2 homologues which may be used as targets for cancer therapies and central nervous system directed treatment methods, and to measure the proliferative potential of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              amplification. The specification describes sequences encoding human analogues of the yeast RADSO, the Drosophila Septin-2 and Acyl-CoA synthetase. The proteins have immunomodulatory activity. The nucleic acids and proteins can be used to identify activated T-cells in a sample population. They can also be used to isolate and identify sequences encoding other proteins or other compounds having immunomodulatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              27-FEB-1997;
